

KOTA Seating Module for Study Environments

KOTA MS-1 is a seating module with sound-suppression qualities that seats four and can be easily rearranged. The modules can be formed into a circular work or study space. They are made of bent plywood and covered with high-pressure laminate (white laminate in the standard finish). The seating surfaces and outer sides of the modules are covered with padded panels, the fabric for which can be selected by the client. The fabric-covered panels can be used as fixing surfaces.
